Subject: Central Maine Power

Hi Jay,

I reviewed the CD from Burns and McDonnell on the proposal for Central Maine Power to build a 1,200 MW transmission line for 145 miles in Maine.

They appear to be early into the wetlands review details (there are no impacts numbers yet), but I wanted to pass along one quick observation. Since 28% of the 145-mile corridor is a new alignment, this would be the area where they should carefully consider burial options, especially along existing disturbed corridors, such as highways.

Thank you, Mark
